## Highly Trained Marine Specialists | 24/7 Operations | Global Presence

CTS Offshore and Marine Ltd delivers asset integrity, maintenance, and skilled labour solutions across energy and marine sectors. Backed by 25+ years of experience, we combine global expertise with local insight for seamless project execution.

### **Hook Up and Commissioning Services**

- Renewable Asset Support
- Fabric Maintenance
- Platform Installation
- Equipment Commissioning

### **Bespoke Technical Teams**

- Skilled Teams for Steel, Aluminum,
- Piping and Mechanical Work
- Support for Retrofit & Maintenance Projects
- IRATA Accredited Teams
- Global Availability

### **Electrical & Instrumentation**

- Ballast Water & Control Panel Repairs
- Engine Control System Troubleshooting
- Class-Approved LED Upgrades

### **Steel & Aluminum**

- SPS Overlay
- GF+ Piping Systems
- 3D Retrofitting Service
- Metal Fabrication & Piping Solutions
- Wind Sail Rotor Installations

### **Engine & Power Systems**

- Main Engine Health Check-ups
- 3D Liner Scanning & Measurement Tech
- Scheduled Maintenance
- Troubleshooting & Overhauls
- Shaft Generators

### **Inspection & Testing**

- NDT Services
- Free CII Fleet Appraisals
- Thermography Analysis
- Vibration Analysis

and more

Our expertise lies in managing challenging, urgent and high-risk projects while minimising downtime.

## Main Engine, Generators & Automation Services

We provide comprehensive overhauling, repair and maintenance for main engines, generators and onboard systems including:

- Health check-ups & 3D liner scanning
- Custom ECM performance tuning
- Scheduled Maintenance (Top Overhaul/Major Overhaul)
- 24/7 Machinery Breakdown Emergency Support
- Repair of Navcom, FDS, ballast water control panels, and MSBs
- and more

| CAT C9.3 ACERT x3    | Top End Overhaul        | Jubail Port, KSA | Sept 2024 |

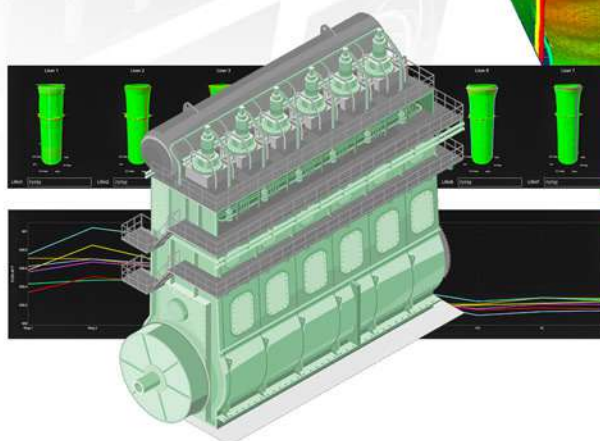

# 3D Liner Scanning

Bringing fast and efficient failure diagnosis and performance monitoring without the need for immobilization or disassembly.

## Harness the benefits of 3D liner scanning:

- ✓ Fast and Effective: Only 10 minutes required per cylinder.
- ✓ Highly Accurate: Ultrasonic accuracy of 100 microns.
- ✓ Global Availability: Engineers on-site at short notice.
- ✓ Comprehensive Accessibility: Portable equipment.
- ✓ Quick Turn Around: Multi-vessel service with Tender access.

3D Liner Scanning reduces downtime by up to 30% and prevents major engine failures, ensuring long-term sustainability with minimal carbon emissions.

## Precision You Can Measure. Problems You Can Prevent.

Enhance operational efficiency, reduce energy consumption, and enable predictive maintenance with our integrated Vibration Monitoring and Infrared Thermography solutions.

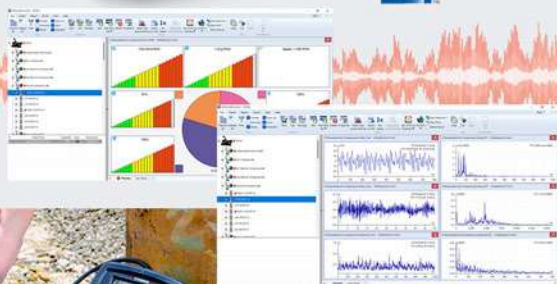

### Key Benefits

- Early fault detection and isolation
- Real-time monitoring of live equipment
- Root cause analysis and risk reduction
- Predictive maintenance planning
- Up to 40% reduction in downtime
- Up to 25% reduction in maintenance costs
- Enhanced safety and energy efficiency

## Know Before It Breaks. Act Before It Fails.

Our thermal and vibration analysis detects early-stage faults, monitors live equipment, and isolates issues before they escalate. From identifying misalignment and bearing wear to faulty electrical connections and circuit overloads, this solution empowers smarter, safer, and more sustainable operations.

## Workforce Provision

CTS Offshore and Marine provides skilled labor for onboard and offshore repairs, eliminating the need for dry docking.

- Operational Flexibility
- Certified and Experienced Personnel
- Comprehensive Skillsets
- Turnkey Solutions
- Cost Effective
- Fluent English Supervisors
- Quality and Safety Standards

Experts in on-site steel and aluminum fabrication, delivering Class-certified repairs and projects with minimal downtime. We provide durable, reliable solutions that meet the highest industry standards.

## OUR EXPERTISE INCLUDES:

- Renewal of steel in ballast tanks, cargo tanks holds, decks, engine room and underwater work
- Repairs to cargo hatch-covers
- Renewal of all types of pipes
- Anchor chain repair
- Renewal of anodes in tanks
- URS 30 hatch-over securing modifications
- SPS Overlay steel renewal
- Many More

## Cold Work Solutions

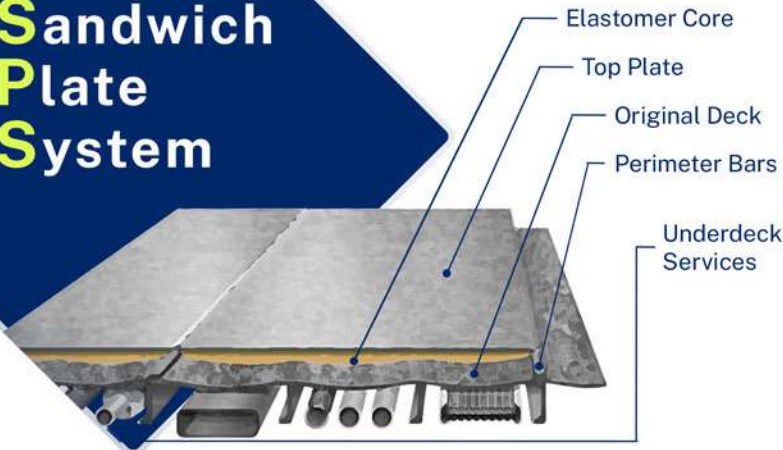

- ✓ GF + Piping Solution
- ✓ Cold Cutting
- ✓ Composite Repairs
- ✓ Clamp Repairs
- ✓ And More

## Sandwich Plate System

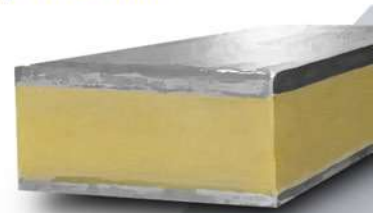

The Sandwich Plate System (SPS) is a patented cold work structural solution featuring two steel plates bonded with a high-performance elastomer core. Engineered to reduce fatigue and reinforce against uplift loads and impact hazards, it's optimized for side shell crack repairs and enhanced fire protection.

## The Smarter Cold Work Solution for Offshore Repairs

### Key Benefits

- ✓ Cold work
- ✓ Fast installation
- ✓ OPEX-optimized
- ✓ Low carbon emissions
- ✓ Superior structural integrity
- ✓ Long-term performance
- ✓ Minimal operational disruption
- ✓ Dive and cofferdam-free

### Application History

CTS delivers comprehensive engineering solutions through our experienced team of naval architects, marine engineers, and technical specialists.

## ENGINEERING SERVICES:

- Retrofit/Upgrades : Full Turnkey Engg solutions along with 3d laser scanning services for precise engineering
- Engineering Analysis : Stability, structural FEM, Hull form optimization
- Naval Architecture : Intact and damage stability, statutory drawings, global strength and fatigue analysis, inclining and tank calibration
- Structural Modifications : Deck strength analysis for vessel and offshore systems
- Pre-commissioning and commissioning support: Ensuring operational readiness
- SPM Engineering Support : Feasibility, basic and detailed engg
- Feasibility Studies : Conversions and system upgrades
- Regulatory Compliance: IMO DCS, EEXI/ CII calculations, EU ETS and more
- Supervision, Project Management

| Increase of reefer containers-Feasibility/ basic and detailed engineering drawings            | Jan 2025 - Apr 2025  |
| Deck pedestal roller arrangement as per compliance, Class-approved drawings.                  | Feb 2024 - Mar 2024  |
| BWTS pre-commissioning and commissioning across 13 vessels w/ 2 engineers attending 5-10 days | June 2021 - Dec 2023 |

## Integrated Emission Reduction Systems

Crafted by experts and implemented by certified CTS professionals, our decarbonisation solutions improve fleet efficiency and lower emissions with a range of advanced technologies.

- 3D Retrofitting Service
- Propeller Inspections / Modifications
- Class-Approved LED Upgrades
- GF+ Piping Weight Reduction
- Shaft Generators
- Marine Absorption Chillers
- Variable Frequency Drives
- Micro Boilers
- Wind Deflectors
- Wind Sail Rotor Installations

- *Free CII Fleet Appraisals*
- CII Consulting
- IMO-Aligned Compliance

## From Arrival to Activation: Turning Structures into Systems

### Key Operational Services

- Platform Readiness & Pre-Commissioning
- Structural Welding & Integration
- Surface Preparation & Coating
- Electrical & Instrumentation Systems
- Mechanical & Piping Works
- Critical Systems Commissioning
- Safety Management & Operational Oversight
- IRATA-Certified Rope Access Teams
- Unplanned & Carry-Over Works

terra firma

### Recent OWF Projects

Hollandse Kust Zuid  
– Alpha & Beta

### Scope of Work

Main Hook-Up Subcontractor:

- Scaffolding, NDT, electrical works
- Blasting/painting of legs/post hook-up
- Construction team supply: welders, platers, pipe fitters, rope access
- Support services in the Netherlands: insulation, Mapress fitters, galvanising, HAZMAT, HVAC

### Location

Netherlands

BorWin Gamma

Main Hook-Up Subcontractor:

- Turnkey execution: welding, scaffolding, leg painting
- Installation of pumps, blasting, painting
- Commissioning support and additional services

North Sea,  
Germany

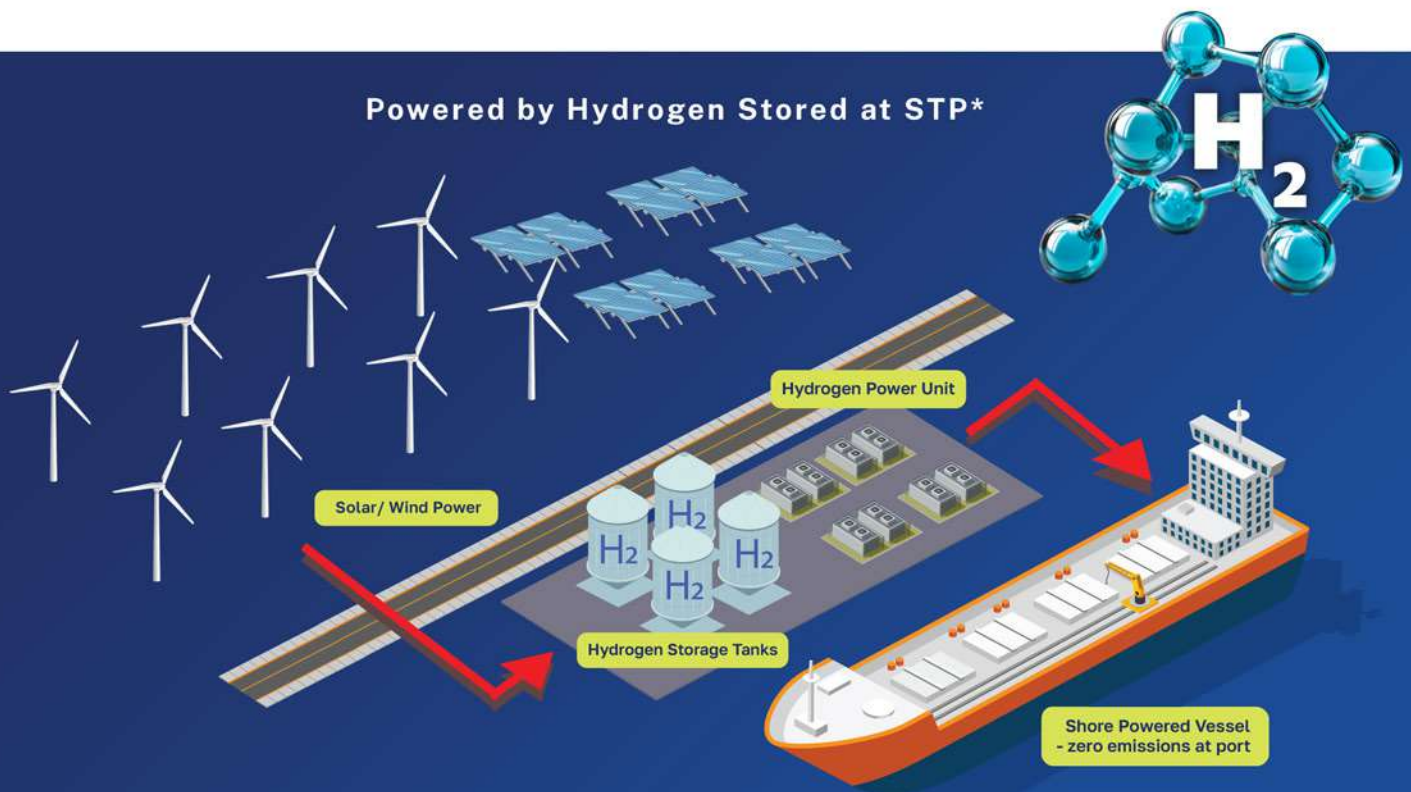

## Key Services:

- Modular eMethanol synthesis units for decentralised production and aggregation
- Engineering sustainable production pathways for green ports through zero-carbon metals, transportation and operation
- Multi-vector energy derivatives for power, heating, and cooling - spin new port adjacent industries (e.g. data centres)
- Capital project development, pre-FEED, FEED, and EPC execution support
- Shore power and vessel electrification for cleaner ports

## A New Era of Hydrogen Storage

Advanced hydrogen infrastructure solution achieving competitive LCoH through optimized storage, transport, and handling systems. Delivers grid-parity shore power while eliminating capacity bottlenecks, enabling cost-effective port expansion and systematic decarbonization.

A sustainable and affordable decarbonisation roadmap.
